

The Five Fuel Laws

Five principles that turn performance nutrition from information into repeatable behaviour, and keep it working long after the advice is forgotten.

01

Fuel to Perform

Energy is the currency of performance.

- Match energy intake to training load.
 - Periodise carbohydrate availability.
 - Never under-fuel on high-demand days.
-

02

Build Your Base

Daily habits build or break the athlete.

- Establish consistent meal timing.
 - Build weekly nutrition rhythms.
 - Create accountability through simple tracking.
-

03

Recover Like a Pro

Recovery prepares the next performance.

- Prioritise protein and carbohydrate after the session, especially when recovery time is short.
 - Rebuild glycogen across the day.
 - Rehydrate with structure, not guesswork.
-

04

Hydrate to Dominate

Hydration supports physical and cognitive output.

- Monitor body weight changes.
 - Use structured hydration protocols.
 - Adapt intake to climate and session intensity.
-

05

Test Before the Game

Competition is not the place to experiment.

- Rehearse match-day meals in training weeks.
 - Trial supplements before competition.
 - Build a proven pre-match routine.
-
